Dry Flocculent Mixing System allows you to rapidly blend a dry flocculent into turbid storm water. This allows the solids to settle out very quickly. You can then discharge the clean water off site. Our system provides a simple & inexpensive way to treat and release.

* Patents Pending as distributed by IES and manufactured by Innovative Turf Solutions LLC
"Floc Socs" can be implemented in your waste stream, ditch channel, sediment basin or pond by attaching the “Floc Soc” to a string/rope and staked into the ground. Pond and sediment basin applications can also be attached in multiples on a string/rope that spans the width of a basin or pond. The “Floc Soc” application insures proper dosing as the Floc™ is dissipated according to turbidity and water flow, allowing for consistent dosing, relieving the contractor of multiple applications, therefore reducing time/labor costs. “Floc Socs” are a great tool for reducing the turbidity, hydrocarbons and heavy metals from your wastewater.

“Floc Socs” can also be used in conjunction with typical Sediment Retention Devices such as wattles, silt fence, ditch checks and hay bales by attaching the “Floc Socs” via a “zip tie” to the sediment retention device (SRD). Replacement socks can then be attached over and over to the SRD when the flocculant has been dissipated out, therefore increasing the effectiveness of the SRD in controlling turbidity, heavy metal and hydrocarbon reduction.
